

user starts working

Once the user starts working on the project, the bot becomes active.

The bot suggests work.

The bot starts up the work timer and suggests tasks that need to be completed.

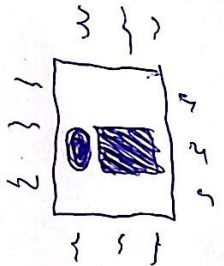

the screen is ~~idle~~ idle

The user has stopped working

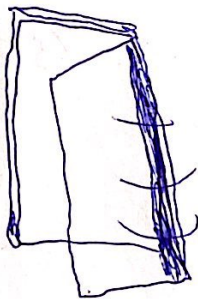

if user does not respond:

The bot notifies other coworkers to help out the user.

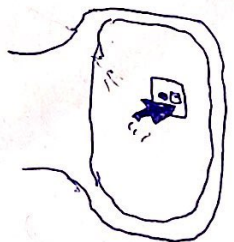

The bot awakens!

The focus bot makes visual and audio stimulus to alert the user that they are wasting time.

Finished work.

The user finishes work in the work timer

user responds

The user acknowledges the bot and interacts with the bot.

Sleeping bot.

The bot powers down until the next work session.
